P#01-ST09:

Introducing the intelligent supply chain.

The typical ERP system leaves a lot to be desired when it comes to supply chains in asset-intensive companies. Supplier integration, project staging, order tracking, process efficiency and strategic sourcing functionality are minimal at best.

ASCI Smart Tools are optimized to provide your operational workforce with automated efficiency and cost reduction for your company. They integrate with — and supplement — your existing systems. Whether you use several applications or one ERP system, Smart Tools provide a Web-based supply chain portal — so real-time information can be accessed anytime, anywhere, by anyone who needs it.

NO PAINFUL MIGRATIONS

Our tools integrate with your current technology. They don't require a painful, expensive transition to a new ERP system. They fill the supply chain gaps in your existing systems.

DEVELOPED BY AND FOR SUPPLY CHAIN PROFESSIONALS

ASCI is one of the world's leading supply chain management providers for asset-intensive industries. We provide supply chain operations in asset-intensive and complex industries where a miscalculation can mean millions in lost production. ASCI, and its clients, use Smart Tools every day to do their jobs.

PERFORMANCE · TECHNOLOGY · PEOPLE

FEATURES OF SMART TOOLS

Innovative Smart Tools fill gaps in your system, streamlining processes, reducing cost and linking critical suppliers and manufacturers to you 24/7:

SmartTracker™

SmartTracker™ is a powerful purchase order tracking tool that provides real-time information for construction or maintenance personnel, buyers, suppliers or anyone else who needs to track an order.

SmartCatalog™

SmartCatalog™ searches the entire catalog record, using the same technology as popular web search portals – so you can quickly find what you're looking for. The user-friendly shopping cart requisitioning function also streamlines the ordering process.

SmartStager™

SmartStager™ brings purchase orders for a defined work scope together, allowing you to track, receive, store and issue a collection of project-related material.

SmartMeasures™

Gain a comprehensive view of logistics efficiency and supplier performance. Transit, compliance, cross-docking, receiving and more can be measured and summarized, with analytics customized to your requirements.

SmartMarkets

Manage workflow and increase purchasing efficiency using a supplier interface. The system checks against the contract spend, bypassing employee interaction if the purchase is within parameters. It posts purchase orders on the Internet and notifies suppliers of new orders. Both supplier and buyer can make approved adjustments in real time using a secure log in.

SmartBundler

SmartBundler drives cost savings for high-volume purchases by linking catalog items to the correct bundle or purchasing agreement – so you can ensure the lowest cost and a known, predefined lead time.

SmartBOMs™

SmartBOMs™ helps you create a hierarchical representation of equipment and parts, with relationships defined down to the smallest detail – including catalog numbers and descriptions.

SmartAuction/Quote

Receive and manage pricing bids from suppliers in an auction format. Then, transfer final pricing data to your vendor agreements to eliminate manual entry.

SmartSpecs™

SmartSpecs™ is a customized, easy-to-search database with real-time access to customer specifications. It ensures the right specs are being used every time and eliminates errors.

GAIN A SMARTER SUPPLY CHAIN; ACHIEVE GREATER PERFORMANCE.

Contact ASCI to learn more about how Smart Tools can enhance your current technology and vastly improve your supply chain performance.
